CONTENTS

OF THE

REGISTRAR-GENERAL'S ANNUAL REPORT FOR 1890.

REPORT:— PAGE

POPULATION. Estimated and actual increase . . . . . v–vi

MARRIAGES. Marriage-rate; Relation between Marriage Rate and commercial activity; Forms of Marriage; Increase of Church and Roman Catholic Marriages; Preference for Marriage by Banns; Previous Civil Condition of Persons married; Ages at Marriage; Signature in Marriage Register; Buildings registered for the Solemnisation of Marriages; Certified Places of Worship . . vi–viii

BIRTHS. Numbers and Rates; Sex; Illegitimate Births . . . ix

DEATHS. General death-rate; County death-rates; Sex; Ages; Excessive Mortality after middle Age; Infant Mortality, comparison between Sexes; Urban and Rural Mortality; Registered Causes of Death; Zymotic or Specific Febrile Diseases; Epidemic Influenza; Hydrophobia; Puerperal Fever; Dietetic, Constitutional, Developmental, and Local Diseases; Deaths from Violence; Deaths of Infants from Suffocation in Bed; Ill-defined and Un-specified Causes; Certification of Causes of Death . . . . . ix–xvii

OFFENCES AGAINST THE REGISTRATION ACT xviii

PROGRESS of REGISTRATION. Aggregate Number of NAMES on the REGISTERS; NUMBER of SEARCHES in the Registers and of CERTIFICATES granted at the CENTRAL OFFICE; FEES received . . xviii

THE ARMY AND NAVY. STRENGTH and MORTALITY of the ARMY at HOME and ABROAD; STRENGTH and MORTALITY of the NAVY . xviii

BIRTHS and DEATHS of BRITISH SUBJECTS at SEA. MARINE REGISTER BOOK; MORTALITY of MERCANTILE MARINE; MORTALITY among PASSENGERS xix

INTERNATIONAL VITAL STATISTICS. Rise in Death Rates . . . xix

METEOROLOGY; Remarks by James Glaisher, Esq., F.R.S. . . . xx–xxii

PRELIMINARY TABLES . . . . . xxiii–lxxv

ABSTRACTS:—

BIRTHS (distinguishing Legitimate and Illegitimate), DEATHS and MARRIAGES Registered in England, and in its Registration Divisions, Counties, and Districts; and BIRTHS and DEATHS in sub-districts . 1–63

MARRIAGES, Analysis of, in Registration Divisions and Counties; distinguishing the mode of Solemnisation, the number in each quarter of the year, the Previous Civil Condition of Persons married, those not of Full Age, and the Signatures in the Marriage Register 64–67

AGES of Persons married, distinguishing those of Bachelors, Spinsters, Widowers, Widows 68–70

DEATHS of Males and Females in Public Institutions. 71–94

DEATHS of Males and Females at different Age-periods, in REGISTRATION DIVISIONS and COUNTIES 95–105

A 68169. Wt. 7931. a 2

ABSTRACTS—*continued.* PAGE

Causes of Death of Males and Females at different Periods of Life in England and Wales 107–121

Causes of Death of Males and Females at different Periods of Life in London 122–135

Causes of Death of Males and Females in each Registration County 136–159

Deaths from certain Selected Causes, and Inquest Cases, in Registration Divisions, Counties, and Districts . . 160–192

Deaths from Accident and Negligence, distinguishing Sex, Age, and Cause or Character of Accident 193–199

Deaths from Suicide, distinguishing Sex, Age, and Method . . . 200–201

Deaths from Murder, distinguishing Sex, Age, and Method . . 202–203

Deaths from Manslaughter, distinguishing Sex, Age, and Method . 204–205

Indexes of Registration Districts, Sub-districts, and of certain Towns, referring to Numbers used in the several Tables of Abstracts . . 206–221

REPORT

TO

The Right Honourable CHARLES T. RITCHIE, M.P., President of the Local Government Board, &c. &c.

(1890.)

SIR,

I HAVE the honour to submit to you the following report on the marriages, births, and deaths registered in England and Wales in the year 1890.

POPULATION.

Since my last annual report was presented to you a census has been taken; and the result, subject to final revision, was that in April last the population of England and Wales consisted of 29,001,018 persons.

Assuming that the growth was equable throughout the past intercensal period, the population in the middle of the year 1890 amounted to 28,762,287 persons, of whom 13,939,577 were males and 14,822,710 were females; and it is on this basis that the rates for the year given in the following report have been calculated.

As the rate of growth in the past decennium was considerably less than it had been in the next preceding intercensal period, the estimates of population, based upon the hypothesis that this latter had been maintained, which have been used in the successive annual reports since 1881, have necessarily been in excess of the reality.

Had the rate of growth in 1871–81 been maintained, the population in the middle of 1890 would have amounted to 29,407,649, whereas the results of the recent census reduce the estimate to 28,762,287, showing an excess of the earlier over the later estimate of no less than 645,362. This excess, however, large as it is, is not large enough to cause any very material difference in the death-rates, as the following table shows, in which the death-rate for each year as calculated on the former estimate is put side by side with the death-rate as calculated on the new basis.

TABLE A.—DEATH-RATES as calculated on the EARLIER and LATER ESTIMATES of POPULATION, 1881–90.

Year.	Death-rate per 1000.		Difference.
	By former Estimates.	By new Estimates.	
1881	18·88	18·89	0·01
1882	19·56	19·62	0·06
1883	19·54	19·64	0·10
1884	19·51	19·66	0·15
1885	19·01	19·21	0·20
1886	19·28	19·52	0·24
1887	18·79	19·07	0·28
1888	17·80	18·11	0·31
1889	17·87	18·22	0·35
1890	19·12	19·55	0·43
Decennial Mean	18·94	19·15	0·21

It appears, then, that the death-rates for England and Wales, as published in the successive annual reports since 1880, have never differed from the rates as calculated on the new basis of population by more than 0·35 per 1000, or by about one death in 3000 persons; a difference so insignificant, that for all practical purposes it may be disregarded.

The same is, however, by no means the case with areas of smaller extent, in which the growth is much less equable than in the aggregate country. Here, for instance, are the death-rates for several counties in 1889 as published in the last annual report, and as now recalculated from the new population figures.

TABLE B.—DEATH-RATES per 1000 in 1889.

County.	As published.	As recalculated.
Essex - - - -	16·2	14·8
Cornwall - - - -	18·4	17·3
Lancashire - - - -	21·0	22·3
East Riding - - - -	18·9	19·9
North Riding - - -	16·6	18·0
Monmouthshire - - -	20·3	18·6

When enumerations are only made at decennial intervals, such differences are unavoidable.

In this report all rates given, whether for the aggregate country or for the individual counties, have been recalculated on the new population figures; it being assumed that the growth has been equable throughout the decennium.

MARRIAGES.

The number of marriages registered in the year was 223,028, and corresponded to a rate of 15·5 persons married per 1000 living. In 1886 the rate was only 14·2, and the lowest since civil registration was instituted, but from that year it rose continuously, year by year, until in 1890 it reached the same point as in 1882 and 1883, that point being higher than in any other year since 1877 (Table 2). If, therefore, the

marriage-rate be an index of prosperity, the condition of the country has been improving for four successive years.

Simultaneously with the rise in 1890 in the marriage-rate, there was a rise in the value of British exports, a rise in the average price of wheat, and a rise in the amount cleared at the Bankers' Clearing House, as the following table shows:

TABLE C.—MARRIAGE-RATE, BRITISH EXPORTS and IMPORTS, PRICE of WHEAT, and amount cleared at the London Bankers' Clearing House, 1860–90.*

YEARS.	Marriage-rate.	Value per Head of Population of United Kingdom.			Average Price of Wheat per Quarter.	Amount cleared at the Bankers' Clearing House per Head of Population.

1888	14·4	6 7 2	10 10 2	18 12 1	31 10	247
1889	15·0	6 13 11	11 10 0	19 19 9	29 9	268
1890	15·5	7 0 7	11 4 5	19 19 7	31 11	271

* The figures in the marriage-rate column are not strictly comparable with those in the value columns, inasmuch as the former relate only to England and Wales, while the latter relate to the whole of the United Kingdom. The figures relating to exports and imports and to the price of wheat are derived from the Board of Trade Statistical Abstracts; and those showing the amount cleared at the London Bankers' Clearing House are calculated upon the population of England and Wales, and are derived from the same source.

Forms of Marriage.—Of the 223,028 marriages contracted in the year, 156,371, or 701 per 1000, were celebrated according to the rites of the Established Church, and 66,657, or 299 per 1000, otherwise. In the immediately preceding year, 1889, the proportions had been respectively 698 and 302; and though the differences between the two years' figures are but small, they are worthy of notice, because only on three previous occasions (1854, 1871, and 1885) had the continuous decline in the proportion of church marriages been broken by an alteration in the opposite direction (Table 5). The proportion of Roman Catholic marriages also slightly rose, namely from 42 per 1000 in both 1888 and 1889 to 43 per 1000 in 1890; while the marriages of the other Christian denominations, the marriages of Jews, and the civil marriages in Superintendent Registrars' offices showed slight fallings off in their proportions.

Among the Church marriages there is a manifest tendency to increase in the proportion of those that are celebrated after publication of banns.

For while the proportion in 1880 was only 870 per 1000, it has risen gradually year by year until in 1889 it was 906, and 909 in 1890.

First marriages; Re-marriages.—It will be seen in Table 7 that of 1000 men married in 1890, 885 were bachelors, and 115 were widowers; while of 1000 women who married, 919 were spinsters and 81 were widows. The number of persons married in 1890 who were described in the register as having been previously divorced, and who are included in the above proportions among the bachelors and the spinsters, was 181, including 87 men and 94 women. This total exceeded that recorded in any of the five preceding years, in which the numbers had been respectively 170, 163, 173, 178, and 150. Of the 87 divorced men, 76 married spinsters, 8 married widows, and 3 married divorced women. Of the 94 divorced women, 64 married bachelors, 27 married widowers, and 3 married divorced men.

Ages at Marriage.—In 7,455, or 3·3 per cent., of the marriages, the ages of both contracting parties were not inserted in the register. The mean ages of the remaining 215,573 couples, whose ages were stated, were 28·32 years for the men and 26·03 years for the women. The mean age of the bachelors was 26·38, of the widowers 44·23, of the spinsters 24·81, and of the widows 40·52 years, the age being in each class the highest as yet recorded, showing that there is an increasing tendency to defer marriage. Evidence of the same fact is given by the decline in the proportion of marriages of boys and girls under 21 years of age, the proportion of the former having fallen from a decennial average (1880–89) of 70 per 1000 to 60 per 1000, and of the latter from 210 to 195 per 1000. The counties in which the proportions of bridegrooms under 21 years of age were the highest in 1890 were Northamptonshire, Bedfordshire, Leicestershire, and Nottinghamshire, and these same four counties also head the list when the average proportions in the preceding ten years are examined. (Table 8).

Signature in Marriage Register.—The men who in 1890 signed the marriage register with marks instead of writing their names were 72 in 1000, while the women were 83 in 1000. In 24 out of 1000 marriages both bridegroom and bride used that form of signature. With the progress of elementary education there has been a continuous diminution in the proportions of both men and women signing with marks; and in 1890 the proportions, as compared with those for 1889, showed a reduction of 7·7 per cent. for men and of 7·8 per cent. for women.

Buildings registered for the Solemnisation of Marriages.—At the end of 1890 there were 15,004 churches or chapels belonging to the Established Church in which marriages could be solemnised, showing an increase of 38 upon the number at the end of the preceding year. There were also 10,553 buildings registered for marriage by other rites than those of the Established Church, showing an increase of 218, or 2·1 per cent., upon the number on the register at the end of 1889. (Table 9).

Certified Places of Worship.—During the year 1890, 568 new buildings were certified for religious worship under the provisions of the Acts 15 & 16 Vict. c. 36, and 18 & 19 Vict. c. 81, while 116 buildings already certified were removed from the register by cancellation; the number of buildings so certified on the register at the end of the year was 26,885. It is probable, however, that some of these are no longer used, though no steps have been taken to remove them from the register by cancellation.

Births.

The births registered in the year numbered 869,937, and were in the proportion of 30·2 to 1000 persons living. This is the lowest birth-rate recorded in any of the last 50 years, and a further step in the decline which has gone on continuously since 1876, when the rate was 36·3, and at its maximum. (Table 2.)

In registration counties the rate varied from 23·4 in Rutlandshire, 24·5 in Sussex, 25·4 in Dorsetshire, and 25·7 in North Wales, to 33·0 in Northumberland, 34·0 in Monmouthshire, 34·6 in Staffordshire, and 36·5 in Durham, being as usual highest in the mining counties and lowest in the agricultural counties. (Table 10.)

Sex.—The male births numbered 442,070, and the female births 427,867, the former being to the latter in the proportion of 1033 to 1000, the proportion in the preceding decennium having been 1038 to 1000.

Illegitimate Births.—The infants registered as born out of wedlock numbered 38,412, and were in the proportion of 46 to 1000 births, and 1·3 to 1000 persons living, this latter being the lowest proportion as yet recorded (Table 2). The registration counties in which the proportions of illegitimate to total births were highest were, as usually, Norfolk, Herefordshire, Shropshire, Cumberland, Westmorland, and North Wales. (Table 10.)

Deaths.

The deaths registered in 1890 numbered 562,248, and were in the proportion of 19·5 to 1000 of the population. This was considerably higher than the rate in any of the three preceding years 1887–8–9, in which it had been successively 19·1, 18·1, and 18·2. It was, however, still a low rate, as compared with most earlier years; and it is to be noted that in no one of the ten consecutive years 1881–90, did the rate rise to 20·0 per 1000, whereas in no year previous to those ten had it ever fallen so low (Table 2). The average rate in these ten years was only 19·14 per 1000.

Among the registration counties the lowest rates, in no case as high as 16·0 per 1000, were in Surrey (extra-met.), Sussex, Berkshire, Dorsetshire, and Westmorland, while the highest, in no case under 20·0 per 1000, were in Monmouthshire 20·0, Warwickshire 20·1, Staffordshire 20·3, Northumberland 20·5, Durham 20·5, London 21·0, West Riding 21·1, and Lancashire 23·4. This geographical distribution of low and high rates is much the same as in previous years; the higher rates being in the industrial, and the lower rates in the rural, counties. (Table 10.)

Sex.—The 562,248 deaths included 290,448 of males and 271,800 of females. The death-rate of males was 20·8, and that of females 18·3 per 1000 living of the corresponding sex.

Out of equal numbers living there were 1136 deaths of males to 1000 deaths of females, the difference being greater than in any year since 1877. The conditions of life in recent years appear to have become increasingly unfavourable to males as compared with females, for while, out of equal numbers living, the male deaths in no year before 1863 reached 1100 to 1000 female deaths, since that year they have never once failed to exceed that proportion. (Table 2.)

Ages at Death.—The year 1890 was remarkable for the excessive mortality among persons in the advanced stage of life. The death-rates both of men and of women from 45 to 55, from 55 to 65, and from 65 to 75 years of age were each either the highest on record (Tables 11 and 12), or the highest with some insignificant exceptions. The death-rates also in the decennial periods on either side of the above-mentioned thirty years, namely, among those who were from 35 to 45, and from 75 to 85, years of age were considerably above the average, while this was not the case in either sex with those who were under 35 years of age. The year, like the year 1875, was clearly a bad one for those who had passed the middle point of life, and especially for those among them who were of the male sex.

The proportion of deaths of infants in the first year of life to registered births, or the infantile mortality, was 151 per 1000, the proportion in the preceding ten years having been 142. The proportions varied in registration counties from 87 in Rutlandshire, 95 in Dorsetshire, and 98 in Wiltshire, to 162 in Leicestershire and in West Riding, 163 in London, 164 in Warwickshire, 166 in Staffordshire, and 174 in Lancashire.

Of the 130,955 infants who died in the first year of life, 62,356 were under three months of age, 26,800 between three and six months, and 41,799 over six months. The mortality, as is invariably the case, was much higher among the male than among the female infants; and the differences between the two sexes in this respect were the greater the younger the infants. This is shown in the following table, in which the annual death-rates of infants under three months, between three and six months, and from six to twelve months, are shown for each sex.

TABLE D.—ANNUAL DEATHS per 1000 living at each Age, 1890.

Age.	Males.	Females.	Male Infant Mortality to Female, taken as 1000.
0—3 months -	333	261	1,276
3—6 months -	147	122	1,205
6—12 months -	120	100	1,200
0—1 year - -	204	164	1,244

It will be noted that in both sexes the mortality is higher as the infants are younger; that at each age the male mortality is much higher than the female mortality; and lastly, that while in the first three months the male rate exceeds the female by 28 per cent., in the remaining nine months the excess is scarcely more than 20 per cent.

Urban and Rural mortality.—The increased mortality in 1890 was shared by both the urban and the rural populations, but affected the former in larger proportion than the latter. For while the death-rate in the Urban Districts rose to 20·9, from 19·0 and 19·3 in the two next preceding years, the rate in the Rural Districts rose only from 16·6 and 16·4 to 17·4. Thus out of equal numbers living, there died in 1890 in the Urban Districts 120 persons to 100 in the Rural Districts, while the proportions had been 114 and 118 in the preceding two years. (Table 24.)

Registered Causes of Death.

The deaths, when distributed to the several classes by their assigned causes, gave the rates shown in the following table:—

Table E.—Mortality from the several Classes of Diseases.

Causes of Death.	Total Deaths 1890.	Rate per Million living.										
		1890.	1889.	1888.	1887.	1886.	1885.	1884.	1883.	1882.	1881.	Mean 1881–90.
Zymotic diseases -	73,094	2,541	2,456	2,133	2,702	2,679	2,531	3,116	2,651	3,096	2,659	2,656
Parasitic diseases -	702	24	24	25	30	36	30	39	39	36	39	32
Dietetic diseases -	2,342	81	67	63	64	61	60	58	66	68	65	65
Constitutional dis. -	97,030	3,374	3,223	3,166	3,213	3,370	3,310	3,431	3,425	3,406	3,328	3,325
Developmental dis. -	46,320	1,611	1,550	1,569	1,578	1,638	1,614	1,586	1,641	1,562	1,584	1,593
Local diseases -	298,107	10,364	9,394	9,643	9,867	10,040	10,007	9,618	9,943	9,617	9,351	9,785
Violence - - -	18,770	653	614	622	652	634	634	656	679	672	697	651
Ill-defined and not specified causes -	25,883	900	893	891	968	1,064	1,019	1,160	1,198	1,162	1,164	1,042
All causes -	562,248	19,548	18,221	18,112	19,074	19,522	19,205	19,664	19,642	19,619	18,887	19,149

Zymotic or Specific Febrile Diseases.—The deaths ascribed to these diseases numbered 73,094, and were in the proportion of 2541 to a million persons living; this rate being somewhat higher than those recorded in either of the two next preceding years, but nevertheless considerably below the decennial average.

The excess in 1890, as compared with the preceding year, was due to the prevalence of two diseases, whooping-cough and influenza. Under all the other headings in the class there was either a decrease or a practically stationary condition.

The deaths from *small-pox* were only 16, having been 23 in 1889; and each of these numbers was less than one tenth of the smallest number registered in any preceding year. There were also 83 and 95 deaths in the two years attributed to chicken-pox, and it is possible that some of these may have been mistaken cases of small-pox. This, however, will not in any degree account for the great falling off in the deaths ascribed to small-pox; for in each previous year since 1874 there had been practically as many, and in most years even more, deaths ascribed to chicken-pox.

The deaths from *measles* numbered 12,614, and were in the proportion of 439 per million living. This proportion was somewhat lower than that recorded in the immediately preceding year, but practically tallied with the average rate in the current decennium. Measles is a disease on which sanitary measures have apparently had little, if any, effect; for the average annual mortality from it in the past quinquennium was as high almost as in 1858–60, and somewhat higher than in any of the intervening quinquennia (Table 17). In 1890 this disease, though not more than usually destructive in the aggregate country, was excessively prevalent in some parts, and the figures for counties in Table 23 (page 1) together with those for districts (pages 170–192), show that among the areas thus seriously affected were London, with West Ham, Middlesex, and Hertfordshire; South Lancashire, Cheshire, and the contiguous part of North Staffordshire; the districts in Nottinghamshire and Derbyshire that lie in the angle between the Trent and the Derwent, with the contiguous districts in the West Riding; and in the south-west of England, the part

of Cornwall comprised in the districts of Truro, Redruth, Falmouth, and Helston.

The deaths from *scarlet fever* numbered 6,974, and were in the proportion of 242 per million persons living, a proportion practically identical with the average in the preceding quinquennium (Table 16). It is a notable fact that the mortality from this disease, which prior to 1885 had scarcely ever been less than 500 per million, and only once (1838) less than 400, fell suddenly to 233 per million, and has never again risen to as high a point as 300 per million. In 1890 the highest mortalities per million from this disease were in Lancashire 558, South Wales 501, West Riding 349, Durham 339, Cumberland 324, and Warwickshire 319; such mining and industrial counties, as were pointed out in a previous report (47th Annual Report, pages xiii–xiv), being specially afflicted by this disease.

The deaths from *enteric fever* numbered 5,146, and were in the proportion of 179 to a million persons living; a rate practically the same as those recorded in each of the two next preceding years. For six consecutive years, 1885–90, the rate of mortality from this disease has not exceeded 185 per million, whereas in no previous year was it once lower than 212.

Enteric fever was first distinguished from other continued fevers in the Annual Reports in 1869; and if we divide the years since that date into three periods, in the first period, from 1869 to 1876, the rate fluctuated from 390 to 309; in the second period, 1877 to 1884, from 306 to 212; and in the third period, from 1885 to 1890, from 185 to 172. Nor can this marked decline be ascribed to confusion between enteric fever and typhus or simple and ill-defined fevers, for the deaths classed under each of these headings have also rapidly declined, and in 1890 were at the minimum as yet reached.

But though there has been this great decrease in enteric fever in the aggregate country, there are parts of it in which the disease appears to be still unduly prevalent. Such, for instance, is the tract of ground that runs along the east side of Northumberland and Durham, from Morpeth on the north to Middlesbrough and Guisbrough on the south. In this space, which comprises eighteen Registration Districts, and had in the middle of 1890 a population estimated as 1,524,549, there were in that year no fewer than 601 deaths from enteric fever, giving a rate of 394 per million living, which was not only much more than twice the rate for all England and Wales, but was almost twice as high as the rate in the twenty-eight great towns included in the Weekly Return, and indeed higher than the rate in any one of these twenty-eight towns, with the single exception of Salford. Moreover, examination of the Annual Reports for the three previous years, 1887–8–9, shows that in a large proportion of these eighteen districts there had been in those years also excessive enteric fever mortality.

The deaths ascribed to *diphtheria* numbered 5150, and were in the proportion of 179 to a million persons living, a proportion somewhat lower than that recorded in 1889, but nevertheless above the average of recent years. (Tables 16 and 17.) There was excess of mortality from this disease in Salford and in parts of Monmouthshire and of Wiltshire, but the places in which it was most fatal were, as usual, chiefly in the South East; and, among the areas thus affected, the most important was London, with the adjoining parts of Middlesex, Essex, Surrey, and Kent. There were also outbreaks in Eastbourne and in Hastings, among the Sussex districts, in Tendring in Essex, in Ipswich in Suffolk, in Bishop Stortford in Hertfordshire, in Bedford and Biggleswade in Bedfordshire, in Wokingham and Cookham in Berkshire, and in Farnham in Surrey, all being situated in what was termed in a previous report (47th Annual Report, page xiii) the South-Eastern Diphtheritic Region.

The deaths from *whooping-cough*, 13,756 in number, were in the proportion of 478 to a million persons living, a higher proportion than in any other year of the decennium with the exceptions of 1882 and 1885, when the proportions were respectively 579 and 481 per million. (Table 16). Among the areas in which this disease appears to have been most destructive were Cornwall with Devonshire; Monmouthshire with Glamorganshire, and the adjoining parts of Brecknockshire and Gloucestershire; and London with Middlesex, Essex, Cambridgeshire, and Huntingdonshire.

Influenza.—The year 1890 was marked by a visitation of this country by epidemic influenza. Every year there are some few deaths ascribed to influenza; but the vagueness with which the term is often employed, and the absence of any very constant pathological feature even in the undoubted cases of this disease, give fair grounds for doubting whether the influenza deaths of ordinary years are of the same nature and due to the same cause as are the deaths in the epidemic periods, and whether they should not have been classed either under Pneumonia or Bronchitis, rather than under the more specific designation.

If, however, there be in ordinary years a transference of deaths from diseases of the respiratory organs to influenza, there is most assuredly in epidemic years a very much greater transference in the contrary direction, a large proportion of the deaths due to the epidemic influence being registered, not under Influenza, but under such headings as Bronchitis, Pneumonia, and the like. For an indisputable epidemic of influenza is almost invariably accompanied, not only by a notable increase of mortality under that heading itself, but also by notable increases under these other headings.

Under these circumstances, it is plain that too much reliance must not be placed upon the official returns of influenza mortality. In the years of epidemics such mortality will be much understated, while the contrary will probably be the case in non-epidemic periods. A careful examination of the figures leaves, however, no reasonable doubt that epidemic influenza was really prevalent in this country in 1841, 1847–8–9, 1851, 1853, and 1858; while the mortality figures for the series of years since this last date give no certain evidence of the existence of an epidemic of this disease, until we reach 1890, that is for more than thirty years.

The outbreak of 1890 began in reality near the close of the preceding year, the disease having apparently made its way into our ports from the Continent, and diffused itself rapidly over the country. It was, however, not until January that the epidemic was thoroughly established. In London it began to subside before the close of that month, and though both its maximum and its subsidence were somewhat later in most other parts of the country, it may be said—disregarding some few exceptional districts—to have come to an end before the close of the quarter.

The total number of deaths directly ascribed to influenza in the year was only 4523, or 157 per million living; but there can be no doubt that the deaths really caused by this disease were far more numerous, for concomitantly with the epidemic there was an enormous rise in the mortality under other headings, and especially under pneumonia and bronchitis; rises which could not be explained by the usual cause of increase under these headings, viz., cold weather, inasmuch as the temperature in the month of January, when the epidemic in London was at its worst, was 6°·8 Fahr., and that of the whole quarter 2°·5 Fahr., above the average.

If we assume—as we may, though not with certainty, yet with much probability—that the increased mortality from pneumonia, bronchitis, and diseases of the organs of circulation, as compared with the average of the nine preceding years of the decennium, was due to the same cause as were the deaths directly ascribed to influenza, the total number of deaths due

directly or indirectly to the epidemic influenza was not merely 4523 but 27,074, or 941 per million living.

The deaths from *diarrhœal affections* numbered 17,837, or 620 per million living. This rate was somewhat below the average, doubtlessly in consequence of the cold weather in July and August, in which months the temperature was 2°·2 F. and 1°·6 F., respectively, below the average.

Hydrophobia.—The deaths from this disease, which had been 30 in the preceding year, 1889, and had averaged 24 annually in the three years 1887–8–9, were only eight in 1890, and fewer than in any year since 1868. This notable decrease was coincident with, and doubtlessly due to, a similar decline in canine rabies; the number of dogs returned to the Board of Agriculture as afflicted by this disease having fallen from 312 in 1889, and an average of 230 in the three years 1887–8–9, to 129 in 1890; and it seems impossible not to associate this remarkable decline with the application of the Muzzling Order by the Board of Agriculture, from 1st January 1890, to those counties in which rabies was known to have been prevalent. These were the counties in which, as was shown in a previous report (51st Annual Report, pages xiii–xv), hydrophobia has been most common, namely, the groups of counties of which London and Lancashire are respectively the centres.

Of the 8 deaths from hydrophobia in 1890, 3 occurred in the West Riding, 2 in Lancashire, 2 in London, and 1 in Dorsetshire.

Puerperal Fever.—The deaths ascribed to this cause were 1956, and, adding to these 2299 deaths from the accidents of childbirth, we have a total of 4255 deaths directly ascribed to parturition. This was in the proportion of 4·89 to 1000 registered births, a rate somewhat above the average in the preceding decennium, which had been 4·64. Concomitantly with the increase under puerperal fever, there was, as almost invariably is the case, an increase under erysipelas.

Dietetic Diseases.—The chief heading in this class is intemperance. The deaths attributed to this cause have increased year by year since 1884, and in 1890 were both absolutely and relatively to the population more numerous than in any previous year. They numbered 2037, and were in the proportion of 70 to a million living, the highest previous rate having been 55, and this in the next preceding year, 1889. In addition to the 2037 deaths directly ascribed to intemperance, there were 218 others among the deaths from accident in which it was stated that the deceased was drunk or suffering from delirium tremens when the accident occurred. Of these 218 deaths, 136 were of men and 82 of women (pages 196 and 199).

Constitutional Diseases.—The deaths in this class numbered 97,030, being in the proportion of 3374 to a million persons living; a rate which, though lower than the decennial average, was considerably higher than the rate recorded in any of the three next preceding years, 1887–8–9.

The increase was partly due to further advances in the mortality from cancer and from diabetes; the rate from each of these steadily increasing diseases in 1890 having been the highest on record; but the main part of the increase in the class was under the headings Phthisis and Other Tubercular Diseases, the mortality under these two headings together having risen from 2283, 2221, and 2258 per million in 1887, 1888, and 1889, to 2376 in 1890. This sudden interruption in the almost unbroken decrease which had been shown by these diseases for a long series of years requires some explanation; and the most probable interpretation is that a number of weakly persons of phthisical constitution, who might otherwise have continued to live for some years, were carried off prematurely by the influenza epidemic

of the first quarter of the year. This explanation is supported by the fact that in London, as is shown by the Weekly Returns, the deaths from phthisis were in great excess during the whole prevalence of the epidemic, and fell to their usual level when the epidemic subsided.

Developmental Diseases.—The mortality under the heading Old Age, which had been declining pretty steadily for some years, again rose in 1890; not improbably from the same cause as was suggested above in the case of phthisis. The deaths also ascribed to *premature birth*, which, as has been pointed out in previous reports, have been for a long series of years becoming more and more numerous in proportion to the registered births, showed a further increase in 1890, having risen progressively from 11·19 per 1000 births in 1861–5 to 16·29 in 1889, and 17·48 in 1890.

Local Diseases.—The deaths in this very large and very heterogeneous class numbered 298,107, and were in the proportion of 10,364 per million living. This rate was not only considerably above the decennial average, but higher than in any other year of the decennium.

The increase was almost entirely under two headings, Diseases of the Organs of Circulation, and Diseases of the Respiratory System. The deaths under the former of these two headings were 1757 per million living, the average rate in the preceding five years having been only 1,657, and the highest rate in any year 1695 per million.

The deaths from diseases of the organs of respiration were 4120 per million living, against an average of 3563 per million in the preceding quinquennium, and more numerous in proportion to the population than in any year in the table (Table 16), with the exceptions of 1875 and 1879.

The great rise in the mortality under these two headings in London during the period when influenza was epidemic makes it highly probable that at any rate a very large share in the increased mortality under them in the whole country was in reality determined by that epidemic; persons who were weakened by an attack of influenza falling easy victims to other incidental maladies.

Violence.—The deaths ascribed to some or other form of violence numbered 18,770, or 653 per million living, a ratio somewhat in excess of the average in the previous five years, which was 631.

This slight excess was due to an increase under *accident and negligence*, the mortality both from *homicide* and from *suicide* being below the average. The deaths from accident and negligence numbered 16,263, and of these 11,600 were of males, and only 4663 of females.

Among the headings under which these deaths are grouped is one in which negligence has more than an average share, namely, suffocation in bed. In the course of the year no fewer than 1544 children, almost all infants in the first year of life, were certified as having died from this cause. This was a larger number than in any preceding year; and, indeed, it appears that the mortality under this heading has been slowly increasing for the past five years, as the following table shows.

Table F.—Deaths of Infants from Suffocation in Bed to 100,000 Births.

Year.	Deaths per 100,000 Births.	Year.	Deaths per 100,000 Births.
1881	130	1886	136
1882	130	1887	141
1883	129	1888	155
1884	125	1889	157
1885	124	1890	174

It will be well therefore to subject these deaths to more minute examination.

The first thing to be noted is that the younger the infant the greater the chance of its suffocation; probably because the very young infant succumbs more easily, and because there is more uninterrupted contact with its mother's body. Thus of the 1517 infants under one year of age who thus died in 1890, 354 were in the first month of life, the average for the remaining eleven months being only 106 per month of life.

Secondly, the accident is more frequent in winter than in summer, doubtlessly owing to the heaping up of bed clothes in the colder weather. Comparing the six winter months with the six warmer months of the year, 60 per cent. of the deaths are registered in the former, and only 40 per cent. in the latter period.

But the point of most interest as regards these deaths from overlying of infants is their distribution over the days, or rather the nights, of the week. An examination of a large number of deaths of infants, concerning which inquests had been held, and the cause and day of death stated in the coroner's certificate, has yielded the results given in the following table, in which the first column of figures relates to the deaths from suffocation in bed.

TABLE G.—DISTRIBUTION over the WEEK, of DEATHS of INFANTS on which INQUESTS have been held.

Day of Week.	Proportions per 1000.	
	Suffocation in Bed.	Other Causes.
Sunday	283	180
Monday	124	132
Tuesday	137	145
Wednesday	116	139
Thursday	115	136
Friday	107	128
Saturday	118	140
	1,000	1,000

Note.—This Table is based on 2020 inquest cases in various parts of the country; in 767 of which cases the cause of death was returned as suffocation in bed.

In interpreting this table, it must be held in mind that the deaths from overlying on any given night will be referred to the day succeeding that night. Thus a woman going to bed with her infant on, say, Saturday night, if she finds on waking the next morning that the infant is dead, will describe the death, of which the precise hour is unknown, as having happened on Sunday morning; and so with the other days.

Remembering this, it will be noted that the proportion of deaths of infants from overlying is more than twice as high on Saturday night as on any other night in the week. The next highest proportion is on Monday night, and after this on Sunday. Through Tuesday, Wednesday, and Thursday nights there is a gradual decline, followed by a slight but distinct rise in the proportion on Friday night.

Now there is one explanation, and as far as can be seen only one, of this curious distribution, and that explanation is that it is determined by differences in the amount of intoxication on different days of the week. Saturday afternoon is the most general holiday and pay day, and is also a day on which public-houses are in full activity. Monday is also in some

places a workman's holiday and a day when public-houses are fully open, and on Monday the wages of Saturday are as yet probably not exhausted. This last condition will also apply to Sunday, which also is a non-working day; but on Sunday the public-houses are partially closed, and the facilities of obtaining drink diminished; so that the smaller proportion of deaths on the night of that day, as compared with Monday night, finds a probable explanation. Monday night passed, begins the real working part of the week, and the infantile deaths fall off in number, the proportion getting less and less as the week's money is gradually exhausted, until on Friday night there is again a slight rise, probably determined by that day being also, in some industries and places, a pay-day. Such seems the only explanation that can be suggested for the distribution of the deaths from overlying; but if this explanation be the true one, it can scarcely be doubted that a similar interpretation must be put upon the very similar distribution of infantile deaths from other causes than overlying, as shown in the second column of figures in Table G, which gives the daily distribution of deaths of infants concerning which inquests have been held but other verdicts found than "suffocation in bed"; these other verdicts being to a very large extent such unsatisfactory findings as "natural causes," "convulsions," and the like. It is impossible to believe that an infant is more likely to die, *cæteris paribus*, on one day of the week than another from "natural causes" or from "convulsions," and the suggestion now offered is that these findings by juries are to a large extent mere aliases for the overlying of an infant, or neglect of its requirements, by a drunken parent.

Ill-defined and Unspecified Causes.—In 25,883 cases, or 4·6 per cent. of the total deaths, the cause of death was so inadequately stated that the death had to be referred to this class; the proportion was slightly less than in the immediately preceding years 1888 and 1889, in each of which it had been 4·9. The decline was doubtlessly in part due to the 3768 letters of inquiry concerning doubtful cases (against 3175 such letters in the previous year) which were sent to medical men. The result of this process was to transfer a large number of cases from ill-defined to definite headings. Thus, for instance, 522 deaths were removed from more or less vague headings, mainly "Tumour," to Cancer or Malignant Disease, and 48 to Syphilis.

Certification of Causes of Death.—Of the 562,248 deaths registered during the year 1890, the causes of 514,720, or of 91·6 per cent., were certified by registered medical practitioners; and the causes of 31,581, or of 5·6 per cent., were certified by coroners after inquest, while the causes of the remaining 15,947 deaths, or of 2·8 per cent., were not certified. The per-centage of inquest cases was the same as it had been in 1889, while that of uncertified deaths showed a further step in the progressive decline which has been noted in previous reports. The 15,947 uncertified cases in 1890 included deaths of infants who had been attended only by midwives, and of persons attended by unregistered practitioners, as well as of persons who had no medical attendance of any kind in their last illness. The lowest proportions per cent. of uncertified deaths in registration counties were 0·6 in extra-metropolitan Middlesex, 0·9 in London and in Wiltshire, and 1·0 in extra-Metropolitan Surrey; while the highest were 4·1 in Derbyshire and in Monmouthshire, 4·7 in Durham, 5·0 in Herefordshire, 5·5 in South Wales, 6·0 in Huntingdonshire, and 6·4 in North Wales. The unusually high proportion in Monmouthshire was due to a colliery explosion which caused a large number of deaths, inquests having been held only on a few of the bodies, while the remainder were registered uncertified. In other counties the proportions did not materially differ from those recorded in 1889.

Offences against the Registration Act of 1874.—In the course of the year 19 prosecutions for offences against this Act were instituted by me, and in each case the prosecution was successful. In 10 of these cases the offence consisted in false statements as to the legitimacy of a child; in 3 others, in false statements as to a woman being married who was really unmarried; in one, in neglect to register a birth after notice to do so; in 2 cases, in the giving of false certificates of death by unregistered medical men; in one, in giving a false certificate of stillbirth by a registered medical man; in one, in using a forged certificate of cause of death; and in one, in permitting a child to be buried as stillborn without a certificate that such was the case. In addition to these 19 cases, a man was prosecuted by the Treasury at my instance, under the Act 19 & 20 Vict. c. 119., s. 18, and convicted of making a false declaration on giving notice of marriage.

Progress of Registration.

The names in the alphabetical indexes of births, deaths, and marriages recorded in the national register of England and Wales were increased in the year 1890 by 1,878,241, this addition raising the aggregate number of names in the indexes, which at the end of 1890 embraced a period of 53½ years, to 81,264.504. The number of searches in 1890 in the various registers was 43,874, exceeding the number in the previous year by 2872. The number of certificates issued was 31,686, showing an increase of 1195 on the number in 1889. The fees received for searches and certificates in 1890 and paid into Her Majesty's Exchequer amounted to 6,178*l.* 4*s.* 0*d.*, exceeding the amount received in the previous year by 294*l.* 1*s.* 6*d.* (Table 26.)

A list of the various public registers and records lodged in the General Register Office, Somerset House, was published in the 34th Annual Report, pages xxi–xxii.

Mortality in the Army.*

The average strength of the Army, at home and abroad, was 209,221, and the deaths were 1813, the rate of mortality thus being 8·7 per 1000, against 9·7 and 9·3 respectively in the preceding two years. The mortality in the army abroad was 11·4 per 1000, the mean rate in the preceding five years having been 15·8; while the rate in the Army at home was 6·0, a rate 1·0 per 1000 higher than that in 1889, but 0·5 below the mean rate in the five years 1885–89, such mean rate itself having shown a considerable decline from the mean rates in previous quinquennia. (Table 29.)

Mortality in the Navy.†

The average force afloat in 1890 was 53,350. The deaths were 456, being in the ratio of 8·54 per 1000 of the strength. Of the 456 deaths, 220 were due to disease, and 236 to violence; so that the death-rate from disease was 4·12, and that from violence 4·42 per 1000.

Of the 236 deaths from violence, 208 resulted from accidental drowning (including 173 in consequence of the wreck of the "Serpent"), 24 from other accidental causes, and 4 from suicide.

---

* Based upon returns furnished by His Royal Highness the Commander-in-Chief.

† Based upon returns furnished by the Director-General of the Medical Department of the Navy.

Births and Deaths of British Subjects at Sea.

Marine Register Book.—In accordance with the Births and Deaths Registration Act of 1874, commanding officers of British ships, whether in Her Majesty's service or not, are required, under a penalty, to transmit returns of all births and deaths occurring on board their ships to the Registrar-General of Shipping and Seamen, who furnishes certified copies of such returns to the Registrars-General of England, Scotland, and Ireland. These certified copies of entries of births and deaths at sea constitute the "Marine Register Book." To this Register were added 186 entries of births and 3573 of deaths during the year 1890. Of these 3573 deaths, so far as could be judged from the entries, which are not always very precise, 1684 were of persons of English origin, while 452 others were of persons of British origin.

Mercantile Marine.—The Registrar-General of Shipping and Seamen reports that the number of masters and seamen afloat in registered vessels belonging to the mercantile marine of the United Kingdom, including the islands in the British Seas, during the year 1890 was 236,108, showing an increase of 5845 upon the number in the preceding year. The reported deaths among masters and seamen during 1890 numbered 3305, corresponding to an annual rate of 14·0 per 1000 of the strength; this was 0·9 per 1000 higher than the rate in the previous year, but was 1·2 per 1000 below the mean rate in the five years 1885–89. (Table 31.)

Among *passengers* on board merchant vessels at sea (Table 32), 108 births and 515 deaths were reported in 1890, the births being below and the deaths slightly above those recorded in the preceding year.

International Vital Statistics.

In Tables 39–56 will be found international vital statistics relating to most of the principal European States. As the sex and age distribution of the population differs greatly in different countries, and as the rates largely depend upon such distribution, as has been repeatedly pointed out in previous reports, the rates in one country cannot be safely compared with the rates in another, without correction.

In order to allow fair comparison, it is most desirable that the various countries should agree upon some standard population, that is a population with fixed sex and age distribution, for international use; and should calculate their birth, marriage, and death rates by such standard.

The most noticeable point in these international tables is the universal rise in the death rate. In every country from which returns were received, the mortality in 1890 was higher, and in most cases very considerably higher, than it had been in the preceding year. The explanation of this universal increase is doubtlessly to be found in the very general prevalence throughout Europe of epidemic influenza.

I have the honour to be,
Sir,
Your faithful Servant,
BRYDGES P. HENNIKER,
Registrar-General.

General Register Office, Somerset House,
26th November 1891.

Remarks on the Meteorology of the Year 1890.*

By James Glaisher, Esq., F.R.S., &c.

The following remarks, both with regard to atmospheric pressure and temperature, are based on observations made near London, but they may be taken as having a general application.

Atmospheric Pressure.—The reading of the barometer was generally above the average till the 17th of January, the mean daily excess for these 17 days being 0·16 in.; from January 18th to the 28th it was below, being particularly so on the 22nd and 23rd, when it was as much as 0·77 in. and 1·18 in. respectively below its average, the mean daily deficiency for these 11 days being 0·38 in.; from January 29th to February 11th it was above, the mean daily excess being 0·32 in.; from February 12th to the 17th it was below, particularly so on the 15th, when it was 0·54 in. below its average; the mean daily deficiency for the 6 days ending February 17th being 0·23 in.; from February 18th to March 4th it was generally above, being particularly so on the 23rd and 24th of February when it was as much as 0·67 in. and 0·57 in. respectively above its average; the mean daily excess for the 15 days ending March 4th being 0·30 in.; from March 5th to the 26th it was below, being particularly so on the 8th, 16th, 17th, 18th, 19th, 20th, 24th, and 25th days, the mean daily deficiency for these 8 days being 0·61 in., and the mean daily deficiency for the 22 days ending March 26th was 0·33 in.; from March 27th to April 5th it was above, the mean daily excess being 0·17 in.; from April 6th to May 20th it was generally below, being particularly so on the 15th, 16th, and 25th days of April, when it was as much as 0·53 in., 0·52 in., and 0·60 in. respectively below its average, the mean daily deficiency for the 45 days ending May 20th being 0·18 in.; from May 21 to June 25th it was generally above, the mean daily excess being 0·10 in.; from June 26th to July 19th it was generally below, being particularly so on the last day of June and first day of July, when it was as much as 0·69 in. and 0·68 in. respectively below its average; the mean daily deficiency for the 24 days ending July 19th being 0·19 in.; from July 20th to August 9th it was generally above, the mean daily excess being 0·12 in.; from August 10th to the 29th it was generally below, being particularly so on the 26th and 27th days when it was as much as 0·51 in. and 0·62 in. respectively below its average; the mean daily deficiency for the 20 days ending August 29th being 0·21 in.; from August 30th to September 15th it was above, the mean daily excess being 0·19 in.; from September 16th to the 22nd it was below, the mean daily deficiency being 0·15 in.; from September 23rd to October 30th it was generally above, being particularly so on the 26th and 27th of September, and the 9th, 10th, 12th, 22nd, and 23rd of October, the mean daily excess for these 7 days being 0·54 in.; and the mean daily excess for the 38 days ending October 30th, was 0·24 in.; from October 31st to November 13th it was below, being particularly so on the 2nd, 4th, and 7th of November, when it was as much as 0·70 in., 0·72 in., and 0·75 in. respectively below its average; the mean daily deficiency for the 14 days ending November 13th being 0·37 in.; from November 14th to December 14th it was generally above, being particularly so on the 17th, 19th, and 20th of November, when it was much as 0·50 in., 0·60 in., and 0·59 in. respectively above its average; the mean daily excess for the 31 days being 0·14 in.; from December 15th to 20th it was below, being as much as 0·73 in. below on the 19th; the mean daily deficiency for these 6 days being 0·29 in.; and from December 21st to the 31st it was above, the mean daily excess being 0·18 in.

---

* For Meteorological Tables, *see* pp. lvi–lxi.

The highest reading of the barometer at the height of 150 feet above the sea was 30·484 ins. on February 23rd, and the lowest was 28·522 ins. on January 23rd; the yearly range was 1·962 ins.

Temperature.—The temperature of the air was below its average till the 3rd of January, being particularly so on the 1st, when it was as much as 9°·7 below, the mean daily deficiency for these three days being 7°·0; from January 4th to February 2nd it was generally above, being particularly so on the 6th, 7th, 12th, 13th, 15th, 16th, and 25th of January, when it was as much as 13°·4, 12°·3, 10°·6, 10°·0, 10°·4, 10°·3, and 10°·7 respectively above its average, and on several other days it varied from 5° to 8½° above; the mean daily excess for the 30 days ending February 2nd, being 5°·8; from February 3rd to March 5th it was below, being particularly so from the 1st to the 4th of March, when it was 11°9, 15°·1, 16°·7, and 20°·0 respectively below its average, and on several other days the deficiency varied from 5° to 9¾°; the mean daily deficiency for the 31 days ending March 5th being 5°·2; from March 6th to the 17th it was above, the mean daily excess being 3°·0; from March 18th to the 21st it was below, the mean daily deficiency being 2°·4; from March 22nd to the 31st it was above, being particularly so on the 28th, when it was as much as 11°·7 above its average, the mean daily excess being 4°·4; from April 1st to the 28th it was below, the mean daily deficiency being 3°·3; from April 29th to May 25th it was generally above, the mean daily excess being 1°·7; from May 26th to September 14th it was generally below, being particularly so on the 5th, 6th, 11th, and 12th of July, and the 30th and 31st of August, the mean daily deficiency for these 6 days being 11°·3; and on several other days in June, July, and August it was as much as 8° and 9° below, the mean daily deficiency for the 116 days ending September 14th being 2°·8; from September 15th to October 7th it was generally above, the mean daily excess being 2°·8; from October 8th to the 29th it was below, being particularly so on the 27th and 28th, when it was as much as 10°·4 and 16°·1 respectively below its average; the mean daily deficiency for the 22 days ending October 29th being 3°·6; from October 30th to November 24th it was generally above, being particularly so on the 18th, 19th, and 23rd days, when it was as much as 10°·8, 11°, and 10°·9 respectively above its average, the mean daily excess for the 28 days being 2°·6; and from November 25th to December 31st it was below, being as much as 21°·4 below on November 28th, and 21°·0 below on December 22nd; and on other days it varied from 1°·9 below on the 4th of December, to 17°·7 below on the 14th of December, the mean daily deficiency for the 37 days ending December 31st being 11°·5.

The highest temperatures of the air were at Royston 83°·7, at the Royal Observatory 82°·8, and at Barnet 82°; and the lowest were 4°·3 at Royston, 6°·0 at Salisbury, and 8°·0 at Barnet and Oxford.

Rainfall.—The fall of rain was above its average in January; below in February; and above its average again in March. The total fall in the three months at Greenwich was 5·10 ins., or 0·13 in. above the average. The fall of rain was above its average in April, below in May, and above its average again in June. The total fall in the three months at Greenwich was 5·65 ins., or 0·14 in. below the average. The fall of rain was above its average in both July and August, and below in September. The total fall for the three months at Greenwich was 7·69 ins., or 0·39 in. above the average. The fall of rain in each of the months of October, November, and December was below its average. The total fall for the three months at Greenwich was 3·44 ins., or 3·65 ins., below the average.

The heaviest falls of rain in the year at our stations were 50·43 ins. at Stonyhurst, 45·10 ins. at Truro, and 36·19 ins. at Plymouth.

The least falls were at Nottingham 17·76 ins., at Oxford 18·41 ins., and at Royston 18·68 ins.

The greatest numbers of days of rain were at Truro 226, at Stonyhurst 223, and at Guernsey 221; and the smallest numbers of rainy days were at Oxford 135, at Barnet 143, and at Wolverhampton 148.

Thunderstorms occurred on 51 days at the different stations during the year; of these, 15 were in August, 9 in May, 8 in June, 4 in September, 3 in each of the months of January, April, July, and October, 2 in March, and one in November.

Thunder was heard but lightning was not seen on 53 days during the year; of these, 17 were in August, 10 in May, 7 in June, 5 in both April and July, 4 in March, 2 in both September and October, and 1 in January.

Lightning was seen but thunder was not heard on 34 days during the year; of these, 10 were in August, 6 in May, 5 in January, 2 in each of the months of April, June, July, September, October, and November, and 1 in February.

Solar halos were seen on 105 days during the year; of these, 16 were were in May, 14 in July, 13 in April, 12 in November, 10 in June, 9 in February, 8 in March, 7 in September, 6 in January, 5 in August, 4 in October, and one in December.

Lunar halos were seen on 38 days during the year; of these, 5 were in each of the months of May, October, and November, 4 in each of the months of January, September, and December, 3 in both February and March, 2 in both April and June, and one in August.

Snow fell on 67 days during the year; of these, 22 were in December, 10 in February, 9 in both January and March, 7 in November, 5 in April, 4 in October, and one in May; the last fall in the spring was on May 15th at Halifax; none fell in June, July, August, or September; and the first fall in the autumn was on the 18th at the Royal Observatory and Blackheath.

Hail fell on 74 days during the year; of these, 12 were in November, 11 in January, 10 in April, 8 in each of the months of March, August, and December, 5 in both February and October, 3 in both May and June, and one in July.

Fog prevailed on 172 days during the year; of these 22 were in both January and December; 20 in both February and September, 15 in both October and November, 14 in March, 12 in April, 11 in June, 9 in July, and 6 in both May and August.

* Deaths from this cause prior to 1881 were classed, partly with "Diseases of Respiratory System" and partly with "Ill-defined and not specified Causes."
† Deaths from these diseases prior to 1881 were classed with "Other Tubercular and Scrofulous Diseases."

TABLE **16.**—ENGLAND.—**Annual Death-rates,** from **Various Causes,** to a **Million Persons living, 1866–90.**

(Decimals are omitted, the nearest whole number being taken. When the Deaths from any Cause were too few to give a rate of 0·5, a cipher is inserted.)

* The Populations of the counties have been estimated to the middle of 1890 from the numbers enumerated at the Censuses in 1871 and 1881.

TABLE 21.—ENGLAND.—**Death-rates of Persons, Males, and Females, from various Causes, 1890**

CAUSE OF DEATH.	Deaths to 1,000,000 living. Persons.	Males.	Females.
ALL CAUSES	19548	20836	18337
Small-pox	1	1	0
Chicken-pox	3	4	3
Measles	439	467	411
Epidemic Rose Rash	3	3	3
Scarlet Fever	242	250	236
Typhus	5	6	5
Relapsing Fever	0	0	0
Influenza	157	173	142
Whooping-cough	478	442	512
Mumps	3	3	3
Diphtheria	179	177	181
Cerebro-spinal Fever	1	2	1
Simple and Ill-defined Fever	13	12	13
Enteric Fever	179	199	160
Other Miasmatic Diseases	0	0	0
Cholera	14	17	11
Diarrhœa, Dysentery	606	653	562
Remittent Fever	2	2	3
Ague	3	4	1
Hydrophobia	0	0	0
Glanders	0	0	–
Splenic Fever	0	0	0
Cow-pox and other Effects of Vaccination	2	2	2
Syphilis	71	75	68
Gonorrhœa, Stricture of Urethra	10	20	0
Phagedæna	1	2	1
Erysipelas	48	51	45
Pyæmia, Septicæmia	13	13	12
Puerperal Fever	68	–	132
Thrush	19	22	17
Other Dis. from Vegetable parasites	0	0	0
Hydatid Disease	2	2	2
Other Dis. from Animal parasites	3	3	3
Starvation, Want of Breast Milk	10	12	8
Scurvy	1	1	0
Intemperance { Chron. Alcoholism	54	65	45
Intemperance { Delirium Tremens	16	29	5
Rheumatic Fever, Rheumatism of Heart	84	87	81
Rheumatism	33	27	38
Gout	21	34	8
Rickets	39	47	32
Cancer	676	512	830
Tabes Mesenterica	265	295	237
Tubercular Meningitis (Acute Hydrocephalus)	240	274	207
Phthisis	1682	1869	1506
Other Forms of Tuberculosis, Scrofula	189	206	174
Purpura, Hæmorrhagic Diathesis	10	11	9
Anæmia, Chlorosis, Leucocythæmia	48	34	62
Diabetes Mellitus	65	77	53
Other Constitutional Dis.	22	16	28
Premature Birth	529	609	453
Atelectasis	26	31	22
Cyanosis	33	38	28
Spina Bifida	20	19	21
Imperforate Anus	6	8	3
Cleft Palate, Harelip	6	8	5
Other Congenital Defects	14	16	12
Old Age	977	865	1082

CAUSE OF DEATH.	Deaths to 1,000,000 living. Persons.	Males.	Females.
Inflammation of Brain or its Membranes	314	356	274
Apoplexy	586	561	612
Softening of Brain	120	137	105
Hemiplegia, Brain Paralysis	303	291	315
Paralysis Agitans	9	10	8
Insanity, General Paralysis of Insane	93	117	70
Chorea	4	2	5
Epilepsy	106	111	101
Convulsions	749	867	637
Laryngismus Stridulus	23	29	16
Idiopathic Tetanus	1	2	0
Paraplegia, Diseases of Spinal Cord	70	82	58
Other Diseases of Nervous System	116	125	107

NOTE.—*Up to and including* 1886 masters were excluded from the above employment and mortality figures; the latter of which contained some cases of men who died in colonial vessels and fishing vessels not registered under the Merchant Shipping Acts, whose crews are not included in the employment column.
Since 1886 masters are included in both columns, and the employment and mortality figures relate only to persons employed in registered vessels belonging to the United Kingdom, the Isle of Man, and Channel Islands.

* The prices of Consols for the years 1840–52 relate to the 12 months beginning 1st April; from 1853 onwards the prices relate to calendar years. For the years 1840–88 the prices relate to stock bearing 3 per cent. interest, for 1889–90 to stock bearing 2 3/4 per cent.

† From the Board of Trade Statistical Abstract.

‡ The prices of coal are derived from Parliamentary Returns furnished by the Registrar of the London Coal Market, by order of the House of Commons.

§ Derived from Returns, published by the Local Government Board, of the number of persons in receipt of Relief on the last day of each week.

INTERNATIONAL VITAL STATISTICS.

Note.—An addition of territory containing a population of about 8000 was made in 1864, and the facts relating thereto are included in this Table from 1860. Previously to 1st January 1860, children who died within 24 hours after birth were counted as still-born.

* Census year.

† Cholera was epidemic in the year 1853, and war raged in the years 1850 and 1864.

NOTE.—The population in the four years 1862–65 and in the years 1867–69 is estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census year. † Cholera prevailed in 1865–66, and war raged in 1870 and 1871.

1883	17,144,319	107,983	215,966	617,023	567,653	12·6	36·0	33·1
1884	17,193,689	115,470	230,940	637,052	535,256	13·4	37·1	31·1

NOTE.—Statistics for the 7 years 1871-77 were not issued owing to the disturbed state of the country. The decline in registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred in that year.

* Censuses were taken on 31st December 1860, 1866, and 1877.

NOTE.—The numbers for Rome were first included with those for the Kingdom of Italy in 1872. The population figures given for census years show the numbers enumerated on 31st December in each of those years; whereas for the end of each of the other years the population is estimated on the assumption that the rate of increase which prevailed in the last inter-censal period has since been maintained.

* Census year.

TABLE 57.—ENGLAND. **Changes** in the **Constitution** of **Registration Districts** and **Sub-districts** during the Year **1890.**

N.B.—(1.) The Name of the District is in SMALL CAPITALS, that of the Sub-district in *Italics*.
(2.) The Populations quoted are the unrevised Numbers enumerated at the Census of 1891.

No. of District.	NAME OF REGISTRATION DISTRICT.	Date of Change.	Nature of Change.
3	CHELSEA - -	1890. 1 October -	The sub-district of *Chelsea North-East* was dissolved. The portion of the sub-district which forms the detached part of the parish of Chelsea was constituted a separate sub-district, named *Chelsea Kensal Town* (population 21,787). The remainder of the sub-district was added to *Chelsea North-West* sub-district, which was re-named *Chelsea North* (population 41,657), and the sub-districts in the district were re-numbered thus:—1. *Chelsea Kensal Town*, 2. *Chelsea North*, and 3. *Chelsea South*.
15	SHOREDITCH - -	1 April -	The sub-districts of *Holywell* and *St. Leonard* were united under the name of *Shoreditch South* (aggregate population 20,098).
50	MAIDSTONE - -	1 October -	The three sub-districts of *Marden*, *Loose*, and *Yalding* were dissolved, and the parishes of which they consisted re-arranged into two sub-districts as follows:—The new sub-district of *Yalding* comprises the parishes of Yalding, Nettlestead, Marden, and Staplehurst (population 7,277); and the new sub-district of *Loose* comprises the parishes of Teston, West Farleigh, Hunton, Linton (including part of Maidstone added to Linton), Boughton Monchelsea, Otham, Bearsted, Loose, East Farleigh, Barming, and West Barming (population 8,630).
91	ISLE OF WIGHT - -	1 January -	The old sub-district of *Ryde* was divided into two sub-districts as follows:—The new sub-district of *Ryde* comprises the parishes of Binstead, Ryde, and St. Helen's (population 17,846); and the new sub-district of *Brading* comprises part of the parish of Newchurch formerly in the old sub-district of Ryde, and the parishes of Brading, Yaverland, and Shanklin (population 11,979). The sub-districts of *Godshill* and *Calbourne* were re-numbered 5 and 6.
181	NEWMARKET - -	1 October -	The sub-districts of *Gazeley* and *Cheveley* were united under the name of *Chevetey*, and the parish of Newmarket All Saints transferred from the *Cheveley* sub-district to that of *Newmarket*. The sub-districts were re-numbered as follows:—1. *Cheveley* (population 8,845), 2. *Newmarket* (population 13,139), and 3. *Soham* (population 8,448).
186	WEST HAM - -	1 January -	The old sub-district of *West Ham* was divided into two parts as follows:—The *West Ham* sub-district comprises the part of the parish of West Ham formerly in West Ham sub-district (population 161,920); and *East Ham* sub-district comprises the parishes of East Ham and Little Ilford (population 32,710). The sub-districts of *Leyton* and *Walthamstow* were re-numbered 4 and 5.
194	MALDON - - -	1 August -	The sub-district of *St. Peter* was dissolved and the parishes which it formerly comprised were distributed as follows:—The parishes of St. Peter and St. Mary, Langford, and Ulting were added to the sub-district of *All Saints* (re-named *Maldon*); and the parishes of Wickham Bishops, Great Braxted, Little Braxted, Great Totham, Little Totham, and Heybridge were added to the sub-district of *Tollesbury*. The sub-districts were re-numbered thus:—1. *Southminster* (population 4,766), 2. *Bradwell* (population 2,516), 3. *Maldon* (population 8,732), and 4. *Tollesbury* (population 7,465).

Table 57.—ENGLAND. Changes in the Constitution of Registration Districts and Sub-districts during the Year 1890—*continued.*

No. of District.	NAME OF REGISTRATION DISTRICT.	Date of Change.	Nature of Change.
		1890.	
213	IPSWICH - - -	1 January -	The sub-district of *St. Margaret* was dissolved and its parts distributed between the two other sub-districts in the IPSWICH district as follows:—The parishes of St. Mary-at-the-Tower, St. Stephen, and Westerfield were added to the sub-district of *St. Matthew*, which was re-named *Ipswich Western;* and the parishes of St. Helen and St. Margaret were added to the sub-district of *St. Clement*, which was re-named *Ipswich Eastern.* The sub-districts were re-numbered thus:—1. *Ipswich Western* (population 27,427), and 2. *Ipswich Eastern* (population 29,654).
369	LICHFIELD - -	1 August -	The sub-districts of *Yoxall* and *Rugeley* were united under the name of *Rugeley* (aggregate population 14,458).
396	STRATFORD-ON-AVON -	1 November	The *Stratford-on-Avon* sub-district was dissolved, and of its constituent parishes that of Snitterfield was added to the *Wootton Wawen* sub-district; and all the remaining parishes, viz., Stratford-on-Avon, Atherstone-on-Stour, Whitchurch, Alderminster, Clifford Chambers, and Preston-on-Stour were added to the *Old Stratford* sub-district, which was re-named *Stratford-on-Avon.* The sub-districts in the STRATFORD-ON-AVON district were re-numbered thus:—1. *Wellesbourne* (population 5,752), 2. *Stratford-on-Avon* (population, 11,788), and 3. *Wootton Wawen* (population 4,353).
431	NOTTINGHAM - -	1 April -	The sub-district of *Byron* was united to that of *St. Ann*, and this amalgamation having completed the original scheme, the names of the different sub-districts were altered and re-numbered as follows:—1. *Lenton* re-named *Nottingham South-West* (population 28,558), 2. *Radford* re-named *Nottingham North-West* (population 54,885), 3. *St. Ann* re-named *Nottingham North-East* (population 52,597), and 4. *Exchange* re-named *Nottingham South-East* (population 40,880).
477	FYLDE - - -	1 January -	The old sub-district of *Poulton-le-Fylde* was divided into two sub-districts, viz.:—The parishes of Bispham-with-Norbreck, Layton-with-Warbreck, the part of Marton previously situated in *Poulton-le-Fylde* sub-district, and Hardhorn-with-Newton were constituted a new sub-district named *Blackpool* (population 25,556); and the remaining parishes, viz., Carleton, Poulton-le-Fylde, Thornton, and Great and Little Singleton, together with the two parishes of Little Eccleston-with-Larbreck and Elswick (transferred from the sub-district of *Kirkham*), were constituted a new sub-district named *Fleetwood* (population 12,888).
587	PONTYPRIDD - -	1 October -	The sub-district of *Pontypridd* was divided into two sub-districts, viz.:—The two parishes of Llanfabon and Eglwysilan forming one sub-district, named *Eglwysilan* (population 18,832), and the parish of Llanwonno forming the other sub-district, named *Llanwonno* (population 30,712).

NOTE.—No change affecting the population of any registration District or Sub-district was made during 1890 under the provisions of the Divided Parishes and Poor Law Amendment Acts, 1876 and 1879.

* The *Registration Counties* consist of groups of Registration Districts, which are generally co-extensive with the Poor Law Unions. A District which extends into two or more Geographical Counties is included entirely in that Registration County in which the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties differ therefore more or less from the boundaries of the Geographical Counties. For areas and populations of the Registration Divisions and Counties, *see* pages 64–67.

* The 632 *Registration Districts* (Paddington 1a and Holyhead 630b having been constituted Registration Districts since the numerical arrangement 1 to 630 was adopted on 1st January 1881) are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged, according to the local position, under the Registration Counties. The Registration Sub-districts (2124 in number at the end of the year 1890) are sub-divisions of Registration Districts, within which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates a Hospital or Infirmary; *L* a Lunatic Asylum; and repetitions of these letters show the number of such Institutions in each Registration sub-district.

† The Deaths in the principal Institutions in England in 1890 are given on pages 71-94.

‡ 3 : 1, 2, 3.—On 1st Oct. 1890 the Registration District of Chelsea was re-divided into three districts as follows: the detached part of Chelsea parish situated at Kensal Green to form the *Chelsea Kensal Town* sub district; and the portions to the north and south respectively of the middle of King's Road to form *Chelsea North* and *Chelsea South* sub-districts. *See* Table 57, pp. lxxv-lxxvi.

* 50 : 1, 2.—On the 1st October 1890, the three sub-districts of Marden, Loose, and Yalding were dissolved, and the parishes of which they consisted rearranged into two sub-districts, viz., *Yalding* and *Loose*. The Births and Deaths are shown as if the change had come into operation at the beginning of the year. *See* Table 57, pp. lxxv-lxxvi.

* 181 : 1, 2.—On the 1st October 1890, the Gazeley sub-district was amalgamated with the *Cheveley* sub-district, and the parish of Newmarket All Saints was transferred from the Cheveley sub-district to the Newmarket sub-district. The Births and Deaths are shown as if the change had come into operation at the beginning of the year. *See* Table 57, pp. lxxv-lxxvi.

† 186 : 2, 3.—On 1st January 1890, the Registration sub district of *West Ham* was divided into two sub districts, which were named *West Ham* and *East Ham*.

* 369 : 2.—On the 1st of August 1890, the sub-districts of *Foxall* and *Rugeley* were united for registration purposes under the name of *Rugeley* sub-district. The Births and Deaths are shown as if the change had come into operation at the beginning of the year. *See* Table 57, pp. lxxv-lxxvi.

† 371.—The District of Wolverhampton comprises the two Poor Law Unions of Seisdon (Tettenhall, Kinver and Wombourn sub-districts), and Wolverhampton (Wolverhampton Western, Wolverhampton Eastern, Willenhall, and Bilston sub-districts).

* 396 : 2, 3.—On the 1st November 1890, the Stratford-on-Avon sub-district was dissolved, and of its constituent parishes, that of Snitterfield was added to the *Wootton Wawen* sub-district, and all the remaining parishes were added to the old Stratford sub-district which was re-named the *Stratford on-Avon* sub-district. The Births and Deaths are shown as if the change had come into operation at the beginning of the year. *See* Table 57, pp. lxxv-lxxvi.

* 431.—On the 1st of April 1890 the sub-district of Byron was added to that of St. Ann, and the four sub districts of Lenton, Radford, St. Ann, and Exchange were respectively renamed *Nottingham South-West*, *Nottingham North-West*, *Nottingham North-East*, and *Nottingham South-East* sub-districts. The Births and Deaths are shown as if the change had come into operation at the beginning of the year. *See* Table 57, pp. lxxv-lxxvi.

* 587 : 1, 2.—On the 1st October 1890, the sub-district of Pontypridd was divided into two sub-districts, viz., the parish of Llanwonno to form the *Llanwonno* sub-district; and the two parishes of Llanfabon and Eglwysilan to form the *Eglwysilan* sub-district. The births and deaths are shown as if the change had come into operation at the beginning of the year. *See* Table 57, pp. lxxv-lxxvi.

DEATHS IN WORKHOUSES, HOSPITALS, AND PUBLIC LUNATIC ASYLUMS.

1890.

The following Table shows the numbers of deaths (Persons, Males, and Females) registered during 1890 in the Workhouses, Hospitals, and Public Lunatic Asylums of England. These figures afford the means of correcting the mortality of districts and sub-districts in which these Institutions are situated. The Table includes 1838 Institutions; of which 741 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 1007 Hospitals or Infirmaries; and 90 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients (held on that account to be public for the purposes of this Table) are also included. In these 1838 Institutions 65,161 deaths were registered during the year, or 11·6 per cent. of the total deaths in England and Wales, against 11·4 and 11·2 per cent. in the two preceding years; 39,346 occurred in Workhouses, 19,655 in Hospitals, and 6160 in Lunatic Asylums. The proportion to total deaths was 7·0 per cent. in Workhouses, 3·5 in Hospitals, and 1·1 in Lunatic Asylums. The proportion of deaths recorded in Workhouses, which had been 6·9 and 6·6 per cent. in 1888 and 1889, rose again to 7·0 per cent. in 1890.

Information relating to the deaths recorded in many Private Lunatic Asylums, Private Asylums for Idiots and Imbeciles, and in a few other institutions, will be found in the notes to the following pages.

Deaths in Workhouses, Hospitals, and Public Lunatic Asylums, 1890.

* In this classification of Violent Deaths the totals of the sub-divisions Burns, Scalds, &c., Drowning, and Suffocation, necessarily differ from the totals of the headings bearing similar names in the classification of Causes of Death on pp. 120, 121, as the classification here takes account of the cause of the injury, and there only of the nature of the injury.

ENGLAND.—DEATHS from ACCIDENT and NEGLIGENCE at different Periods of Life, in the Year 1890—**Males**—*continued.*

No.	Cause or Character of Accident.	All Ages.	Ages at Death. Total under 1 Year. Infants under 1 Month.	Others.	1–	2–	3–	4–	Total under 5 Years.	5–	10–	15–	20–	25–	35–	45–	55–	65–	75–	85 and upwards.

* The deaths of 4 males from Hydrophobia in the year are classed under Zoogenous Diseases in the Table of Causes of Death (*see* p. 112).
† When a person dies from an operation, performed on account of any disease or injury the nature of which is stated in the certificate, the death is classed under that disease or injury.

OF the above 11600 ACCIDENTS, 131 are stated to have occurred to Men in a state of INTOXICATION, and 5 to Men suffering from DELIRIUM TREMENS. And in 311 other cases Death was accelerated by the supervention of ERYSIPELAS, MORTIFICATION, PYÆMIA, or TETANUS. Here follow the details:—

Causes inducing or accelerating Deaths from Accident.	All Ages.	Total under 1 Year. Infants under 1 Month.	Others.	1–	2–	3–	4–	Total under 5 Years.	5–	10–	15–	20–	25–	35–	45–	55–	65–	75–	85 and upwards.
Intoxication at time of Accident	131	-	-	-	-	-	-	-	-	-	2	4	33	27	28	24	12	1	-
Delirium Tremens ditto	5	-	-	-	-	-	-	-	-	-	-	1	-	2	1	1	-	-	-
Acceleration by Erysipelas	28	-	-	-	-	1	-	1	-	-	1	1	2	4	5	1	7	5	1
Acceleration by Mortification	20	-	-	-	-	-	-	-	2	-	-	-	1	-	2	3	6	6	-
Acceleration by Pyæmia	137	1	1	5	-	4	2	13	7	5	6	3	18	22	20	25	16	2	-
Acceleration by Tetanus *	126	1	-	2	1	1	3	8	7	27	11	18	18	8	13	12	3	1	-

* Cases of tetanus which are not stated to be the result of injury are classed as "Idiopathic Tetanus" in the Table of Causes of Death (*see* page 114).

* The deaths of 4 females from Hydrophobia in the year are classed under Zoogenous diseases, in the Table of Causes of Death (*see* p. 113.)
† When a person dies from an operation, performed on account of any disease or injury the nature of which is stated in the certificate, the death is classed under that disease or injury.

OF the above 4663 ACCIDENTS, 63 are stated to have occurred to Women in a state of INTOXICATION, and 19 to Women suffering from DELIRIUM TREMENS. And in 64 other cases Death was accelerated by the supervention of ERYSIPELAS, MORTIFICATION, PYÆMIA, or TETANUS.* Here follow the details:—

Causes inducing or accelerating Deaths from Accident.	All Ages.	Total under 1 Year. Infants under 1 Month.	Others.	1–	2–	3–	4–	Total under 5 Years.	5–	10–	15–	20–	25–	35–	45–	55–	65–	75–	85 and upwards.
Intoxication at time of Accident	63	–	–	–	–	–	–	–	–	–	–	1	7	17	17	15	4	2	–
Delirium Tremens, ditto	19	–	–	–	–	–	–	–	2	–	–	3	2	–	–	8	2	2	–
Acceleration by Mortification	11	–	–	1	–	–	1	2	3	–	–	1	–	–	–	1	2	2	–
Acceleration by Pyæmia	33	–	1	–	1	–	1	3	–	4	–	1	3	3	8	6	1	4	–
Acceleration by Tetanus*	20	1	–	–	–	1	–	2	4	5	–	–	2	3	–	2	1	1	–

* Cases of Tetanus which are not stated to be the result of injury are classed as "Idiopathic Tetanus" in the Table of Causes of Deaths (*see* page 115).

INDEX OF REGISTRATION DISTRICTS.

The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report.* The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A.

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 630 in the Abstracts for the year 1881. Since that date two new Registration Districts have been formed, the District of Kensington (1) having been divided into Paddington (1*a*) and Kensington (1*b*), and the District of Anglesey (630) into Anglesey (630*a*) and Holyhead (630*b*).

For names of Towns, such as Leamington, Torquay, &c., which are not found in this "Index of Registration Districts," see the "Index of Registration Sub-districts" (pp. 208–217) *and "Index of certain Towns"* (pp. 218, 219).

INDEX OF REGISTRATION SUB-DISTRICTS.

[This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having *compound names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G; St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to its numerical place in the Tables of Abstracts; thus, Abbey Holme (573; 2) is the 2d Sub-District of the Wigton District, No. 573.]

Sub-District.	District.	No.
A		
Abbey Holme	Wigton	573; 2
Abbots Bromley	Uttoxeter	366; 2
Abbotsbury	Weymouth	264; 4
